

JURA Coffee App Professional

PROFESSIONAL

Customised coffee from your tablet

The new JURA Coffee App Professional allows you to easily transfer your personal coffee preferences to your tablet and benefit from numerous setting and programming options on the automatic coffee machine linked via Bluetooth®. The settings saved on the machine are not affected.

Customise your start screen, give your favourite specialities new names or an image of your choice and program your specialities just as you like them.

The app has two further benefits for all vending and operating providers. Preparation, day and maintenance counters can also be accessed, as can the active prompts to take action. All you need is the Smart Connect Bluetooth® transmitter and the JURA Coffee App Professional, available for both iOS and Android.

Technical overview

Technical data

Compatible with Android & iOS	■
Messages & counter readings can be sent automatically by e-mail	■

Technical requirements of tablet

Customised machine data

All machine data, including preparation, day and maintenance counters, can be read electronically at any time and emailed to you manually or automatically* if desired.

* Android allows e-mails to be sent automatically.
iOS requires a brief confirmation via the user interface

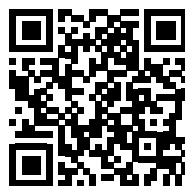

Customised prompts

Messages about the machine's status (e.g. fill water, fill beans, empty coffee grounds) are sent automatically*, so they always reach the relevant people. This ensures that the coffee machine is always ready for use.

The app can be downloaded here:

Note: To make full use of JURA Coffee Professional, you will need the following: JURA Coffee App Professional (available from our website), the Smart Connect transmitter (art. 72167) and an active Bluetooth connection between the coffee machine and tablet. The latter must satisfy the technical requirements and is not supplied as standard.
